

overall layout has been changed slightly to suit the small page size better. In general, documents that were written for version 0.3 will exhibit different line and page breaks when typeset using the new version of this document class.

Last updated 2004/08/12
printed December 22, 2004

Overview

The document class *leaflet* creates a document of (up to) six small pages in portrait orientation, arranged physically on two “normal-size” pages. The target page sizes supported by the standard *L^AT_EX* article are available, plus *a3paper*. Printing these to both sides of a sheet and folding appropriately will yield a six-page leaflet.

Requirements

Using the *leaflet* class requires that the final document is created in PostScript or PDF format, using

- *T_EX* and *dvips*, or
- *pdfT_EX*, or
- *VT_EX* in PS or PDF mode.

(Some other drivers supported by standard *L^AT_EX* work as well.)

The non-standard macro package *everyshi* [2] is used by the *leaflet* class.

Features

Basically the *leaflet* class provides the same features as the standard *article* class. There are, however, a number of differences and restrictions, as well as some additional facilities and peculiarities:

quired to arrange the pages on the sheet. Furthermore, the main change is, that no more post-processing is required to arrange the pages on the sheet.

The present release of the left class differs basically from its predecessor, version 0.3, which had been developed originally by Jürgen Schlegelmeilch.

Changes over version 0.3

Other options are passed to the article class.

At the same time, the determine behaviour in case of an error is revised—and the surplus pages (combi-

(large) target page (combi-) or as individual pages (small) pages should be output combined on a

combi-*¹, nocombiate These options specify whether the text does not fit on six (small) pages. By default or not a fold mark is to be printed.

frontside, backside, bothsides². These options control whether only the front page, the back page or both frontside, backside, bothsides². These options con-
